

## ABSTRACT

## WIRELESS CONNECTION FOR PORTABLE SYSTEMS

5           A client computer system is suitable for connection  
to a data processing network having a controlling system.  
The controlling system is operable to issue a wake-up  
request to the client computer system. The wake-up  
request is issued by means of a wireless connection  
10 between the controlling system and the client computer  
system. The client computer system, on receipt of the  
wake-up request, powers itself on so as to allow normal  
operation of the client computer system.
